The Avalon Active Seniors Group has many facets, walking, Scrabble and Mahjong Group, a lively current affairs Discussion Group and an Art Group. Each year they display their works for the public to visit and appreciate. This years exhibition and exhibitors HERE

Winter In Pittwater

7 a.m. view towards National Park from Careel Bay 12.7.2013. Photo by A.J Guesdon, 2013.

Winter in Pittwater is beautiful. Fog sliding out of the Ku-ring-gai National Park and the Hawkesbury at dawn, young and old in and on the salt water as it's warmer in then out, resident waterbirds and winter wattle blooming, the peace and quiet are what being here are all about. This week's **Pictorial**, for, about and by you, brings some of these visions.

Frank Bazik, General Manager Mona Vale Hospital, Eileen Gordon, Mayor Jacqui Townsend.

Eileen Gordon and Winifred Taylor Recognised For Decades of Service to Mona Vale Hospital Auxiliary

At the meeting of the Mona Vale Hospital Auxiliary this week Winifred Taylor was awarded a 25 year certificate for her membership on the Auxiliary at the AGM. She has been a dedicated worker and still attends some of our functions even though she is in her 90s. Her main contribution these days is growing the sought after Seville oranges which our marmalade makers use. Yummy!

Eileen Gordon received a Life Member Award. Eileen has been the driving force behind the success of the Auxiliary and because of her its numbers have doubled while she has been president. She has belonged for around 15 years and been president for six. Eileen is the first point of contact for the Pittwater - Warringah community and so many donations have been made to the Auxiliary because of her prominence in it. She has been involved with the new Maternity department, the refurbishment of the chapel, securing the funds for the new Palliative Care building and Rehabilitation Unit and liaising with staff to fulfil wish lists for the wards, particularly the Children's Ward, to name a few of her works. Eileen secures Government grants and now is on the 50 year hospital jubilee committee. Eileen is also an accomplished speaker and often informs groups about the hospital and auxiliary.

Eileen has stepped down from her role as President of the Mona Vale Hospital Auxiliary and is now Public Relations Officer. The Auxiliary will now have three vice presidents as no one was willing to take on her demanding job.

Champions for Mona Vale Hospital - Eunice Raymond, Chair - Save Mona Vale Hospital Committee and Eileen Gordon, former President of Mona Vale Hospital Auxiliary

Eileen and John Gordon - both members of Mona Vale Hospital Auxiliary.

Report by Waverney Perman, Photos by Michael Mannington, 2013.

Avalon Active Seniors Art Group 2013 Exhibition

Avalon Active Seniors Group Art Show 2013

On Saturday 13th of July, 2013, we went to the Avalon Recreation centre in Old Barrenjoey Road to have a look at some of the works displayed this year by members of the Art Group of Avalon Active Seniors. Besides meeting a new member we also caught up with some whom we met last year and could clearly see a progression in their works. Some had decided to work in acrylics where last year they had created predominantly in watercolours, while others had moved into new subject matter from cherished pets to landscapes.

The ladies present were a sheer delight to talk to and related how they hung their works on the Friday night and enjoyed all the aspects, some exhausting, that go into curating, mounting and opening an exhibition.

We asked those present, the sole gentleman member Owen not being there this year, a little about their paintings and the Avalon Active Seniors Group. As usual, despite the wonderful quality of the works on display, the artists were quite modest about their works;

Joanne:

What do you have in the exhibition this year Joanne?

A male and female portrait and a surfing painting.

What do you like painting?

All sorts of things.

What is your favourite subject to paint?

Portraits. Trying to.

How long have you been coming to the Art Group classes?

Five years.

Can you see a progression in your skills?

Oh yes.

What is the best thing about coming to the classes with the Art Group?

The company and comrades.

Shirley:

What do you have in the exhibition this year Shirley?

I've got a few family ones, ones of places I've been and some of things that I like.

How long have you been coming to the classes?

Since it started, about eight years.

Can you see your work progressing?

Yes and no. Sometimes I look at the first ones and think 'I wish I could do that again.'

What's the best thing about coming to the classes for you?

The comradeship with the others who attend.

What is your favourite subject matter to paint?

I like painting scenery.

Margaret:

What do you have in the exhibition this year Margaret?

I've got a painting of magnolias, a portrait, paintings of flowers and seascapes.

I can see your work has progressed since last year Margaret.

I think it's deteriorated!

What is your favourite subject to paint?

Flowers.

What's the best thing about coming to the classes for you?

Our companionship. We all get on wonderfully well and we all have a good sense of humour.

Barbara T:

What do you have in the exhibition this year Barbara?

I've got some pots and a cheeky lady and some landscapes and a beachscape through a window.

Why is she a cheeky lady?

Well, it's obvious; her cheeks are showing and she's very pert.

What's the best thing about coming to the Art Group for you?

The companionship and the fun, it's really good fun, and it makes you paint. It gives you an incentive to do things.

Do you think your skills have progressed in the last year?

Well, I've gone over to acrylics now because I found watercolours so demanding. So now I'm trying those. This is my first attempt at working with those. It's more the company and the fun and getting a chance to be creative I enjoy.

Andree: a new member who is exhibiting for the first time.

What do you have in the exhibition this year Andree?

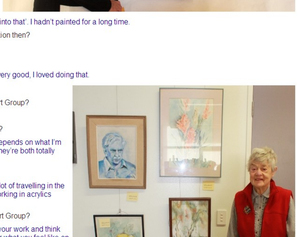
I have those three there taken from photos; the little boy with the umbrella, I call that 'Grandma's Red Umbrella'. The other one is actually my son in law and my son's daughter. He's teaching her to fish. The other one is a combination of two photos that I took along the beach somewhere.

So most of your works are derived from photographs you have taken?

Yes, they are. I did an eight week portrait course with Stephanie Brown recently and I'd like to keep on trying that. Stephanie's amazing. I'd like to do another eight week course but I thought I'd look at what I'd learnt, practice and then go back.

So portraiture is your favourite subject at present?

I do like it, yes, the photos. That little fellow with the umbrella is my grandson; I've got the mouth right but I can't get the eyes right. If you get the eyes right you're doing pretty well.



What's your favourite thing about being involved in the Avalon active Seniors Art Group?

I like them, they're nice. I came here last year to have a look at this and thought 'I want to get into that'. I hadn't painted for a long time.

This is your first time with the AASG Art Exhibition then?

Yes, with an exhibition.

Is it exciting?

It is exciting; putting it together yesterday was very good, I loved doing that.

Elizabeth:

How long have you been coming to the AAS Art Group?

About four or five years.

Have you seen your work progress in that time?

Some of it is stationary and some of it has. It depends on what I'm using; I work in acrylics and watercolours and they're both totally different. I also do a bit of charcoal.

What subject matter do you like working on?

I prefer scenery in watercolours. I have done a lot of travelling in the West and have worked in the bush. Now I'm working in acrylics doing scenes.

What's the best thing about being part of this art Group?

It keeps you going. You can't stop; you look at your work and think 'I've got to do this for Monday', it doesn't matter what you feel like on Sunday, you know you've got to do something by Monday.

So it's a good positive influence in your life?

I think so. They're nice people and we mix well

The Avalon Active Seniors Group was formed over eight years ago, and a small group of painters who had been struggling along in a private capacity, were invited to join. These seven ladies and one gentleman formed the nucleus of what is now the AASG Art Group. This wonderful mix of creative artists meeting at the Avalon Recreation Centre on Mondays are just one activity offered by Avalon Active Seniors Group. My Word – creative writing is offered on Thursdays. Soapbox – a discussion group on currents affairs is on offer on Wednesdays(bring your sense of humour). The Games Room with Mahjong and Scrabble on offer is available on Thursday afternoons and there is also a weekly Walking Group with trips in the local area. There is also talk of beginning a Bridge class should enough people express interest.

Details of whom to contact for each activity are below. Joining Avalon Active costs a mere $10.00 for Annual Membership and a small fee for most activities. Please contact Joanne for details on 9913 7811.

Art Group (Mondays 9.30 a.m. – 12.30 p.m) Barbara 9918 0424

July 14 - 20, 2013: Issue 119

Willy Wagtail

One of the most delightful birdsongs you hear when strolling over the green open spaces or alongside the creeks of Pittwater is that of the Willy Wagtail. They can sometimes get quite noisy, especially this time of the year as they head into their breeding season, when disputes over territory, from which humans are not immune, cause their sweet twitters to get a little more raucous, insistent and even scolding. When not scolding they have a pleasant melodious range of songs communicating or calling to their mate. In his book *What Bird is That?*(1935), Neville Cayley writes that it has "*a pleasant call resembling sweet pretty little creature, frequently uttered during the day or night, especially on moonlight nights*".

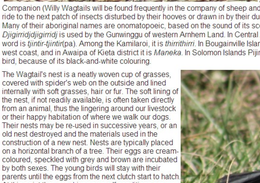
Willy Wagtails are seemingly unafraid of us and will flit in your tracks scooping up insects you have disturbed from the grasses or perch on any near post and eye you without fear. Willy Wagtails will harrass not only small birds but also much larger by comparison species like the Australian Magpie (*Gymnorhina tibicen*), Raven (*Corvus coronoides*), Laughing Kookaburra (*Dacelo novaeguineae*), and even the giant's of the bird world, Wedge-tailed Eagles (*Aquila audax*). Some have been known to attack domestic dogs, cats and humans which approach its nest too closely. In Western Australia they have been observed harassing snake-neck turtles and tiger snakes.

When harassing an opponent, the Willie Wagtail avoids the head and aims for the rear. Both the male and female may engage in this behaviour, and generally more intensely in the breeding season. Territories range from 1–3 ha (2–7 acres) in area. A pair of birds will declare and defend their territory against other pairs in a diving display. One bird remains still while the other loops and dives repeatedly before the roles are reversed; both sing all the while.

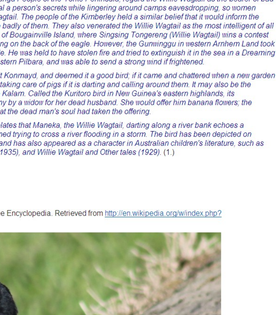
They are the largest and most well know of Australian fantails. Their name stems from their habit of wagging their tail from side to side as they flit over lawns and watercourses scooping up a meal. They will wag their tail feathers even when waiting to dive off onto another insect from a perch. Their plumage is black above with a white belly and are distinguished from other similar-sized black and white birds by their black throat and white eyebrows and whisker marks. Younger Willy Wagtails will have a rust edge to their feathers.

The Willie Wagtail Willie (or Willy) Wagtail (*Rhipidura leucophrys*) a passerine bird, was first described by ornithologist John Latham in 1801 as Turdus leucophrys. Its specific epithet is derived from the Ancient Greek words leukos "white" and ōphrys "eyebrow". Other early scientific names include Muscicapa tricolor by Vieillot, and Rhipidura motacilloides by naturalists Nicholas Aylward Vigors and Thomas Horsfield in 1827, who erected the genus Rhipidura. The generic term is derived from the Ancient Greek rhipis "fan" and oura "tail" John Gould and other early writers referred to the species as the Black-and-white Fantail, although did note the current name. However,Willie Wagtail rapidly became widely accepted sometime after 1916. 'Wagtail' is derived from its active behaviour, while the origins of 'Willie' are obscure. The name had been in use colloquially for the Pied subspecies of the White Wagtail (*Motacilla alba*) on the Isle of Man, and Northern Ireland.

Australian vernacular names applied include Shepherd's Companion (Willy Wagtails will be found frequently in the company of sheep and cattle, perching quite happily on their backs and getting a ride to the next patch of insects disturbed by their hooves or drawn in by their dung.), Frogbird, Morning Bird, and Australian Nightingale. Many of their aboriginal names are onomatopoeic, based on the sound of its scolding call. *Djidjidjidi* is a name from the Kimberley, and *Djigimdjdjigimdj* is used by the Gunwinggu of western Arnhem Land. In Central Australia, southwest of Alice Springs, the Pitjantjatjara word is *tjintir-tjintir*pa). Among the Kamilaroi, it is *thirrthirrn*. In Bougainville Island, it is called *Tsiropen* in the Banoni language from the west coast, and in Awapa of Kieta district it is *Maneka*. In Solomon Islands Pijin it is sometimes called the polis (police) or pris (priest) bird, because of its black-and-white colouring.



The Wagtail's nest is a neatly woven cup of grasses, covered with spider's web on the outside and lined internally with soft grasses, hair or fur. The soft lining of the nest, if not readily available, is often taken directly from an animal, thus the lingering around of our livestock or their happy habitation of where we walk our dogs. Their nests may be re-used in successive years, or an old nest destroyed and the materials used in the construction of a new nest. Nests are typically placed on a horizontal branch of a tree. Their eggs are cream-coloured, speckled with grey and brown are incubated by both sexes. The young birds will stay with their parents until free from the next clutch start to hatch. At this point they are driven away. If conditions are favourable, the couple may raise up to four successive clutches in a single season. Rafters and eaves may also be used. Willy Wagtails have been noted building their nests in the vicinity of those of the Magpie-lark (Grallina cyanoleuca), possibly taking advantage of the latter bird's territoriality and aggression toward intruders. Similarly, it is not afraid to build near human habitation.



The bird world of the Willy Wagtail seems to mirror the human world in some ways; the female Pallid Cuckoo (*Cuculus pallidus*) has been known to lay eggs in a Willie Wagtail nest, although the hosts often recognise and eject the foreign eggs, so successful brood parasitism is rare. Parasitism by the Fan-tailed (*Cacomantis flabelliformis*), Brush, (*C. variolosus*), Horsfield's Bronze (*Chrysococcyx basalis*), and Shining Bronze Cuckoo (*C. lucidus*) have also been reported.

They are found throughout Australia, excepting the island of Tasmania and also reside in New Guinea, the Solomon Islands, the Bismarck Archipelago and the Moluccas.

Wagtails are a member of the fantail genus Rhipidura and is a part of a 'core corvine' group that includes true crows and ravens, drongos and birds of paradise. Within this group, fantails are placed in the family Dicruridae, although some bird experts consider them distinct enough to warrant their own small family, Rhipiduridae.

The Willie Wagtail was a feature in Australian aboriginal folklore. Aboriginal tribes in parts of southeastern Australia, such as the Ngarrindjeri of Lower Murray River and the Namunga People of the Yorke Peninsula, regard the Willie Wagtail as the bearer of bad news. It was thought that the Willie Wagtail could steal a person's secrets while lingering around camps eavesdropping, so women would be tight-lipped in the presence of the Willie Wagtail. The people of the Kimberley held a similar belief that it would inform the spirit of the recently departed of everything relatives spoke badly of them. They also venerated the Willie Wagtail as the most intelligent of all animals. Its cleverness is also seen in a Tinputz tale of Bougainville Island, where Singsing Tongereng (Willie Wagtail) wins a contest among all birds to see who can fly the highest by riding on the back of the eagle. However, the Gunwinggu in western Arnhem Land took a dimmer view and regarded it as a liar and attatletale. He was held to have stolen fire and tried to extinguish it in the sea in a Dreaming story of the Yindjibarndi people of the central and western Pilbara, and was able to send a strong wind if frightened.

The Kalam people of New Guinea highlands called it Konmayd, and deemed it a good bird; if it came and chattered when a new garden is tilled, then there will be good crops. It is said to be taking care of pigs if it is darting and calling around them. It may also be the manifestation of the ghost of paternal relatives to the Kalam. Called the Kuntoro bird in New Guinea's eastern highlands, its appearance was significant in the mourning ceremony by a widow for her dead husband. She would offer him banana flowers; the presence of the bird singing nearby would confirm that the dead man's soul had taken the offering.

A tale from the Kieta district of Bougainville Island relates that Maneka, the Willie Wagtail, darting along a river bank echoes a legendary daughter looking for her mother who drowned trying to cross a river flooding in a storm. The bird has been depicted on postage stamps in Palau and the Solomon Islands, and has also appeared as a character in Australian children's literature, such as Dot and the Kangaroo (1999), Blinky Bill Grows Up (1935), and Willie Wagtail and Other Tales (1929). Why Blackfellows Never Travel Alone
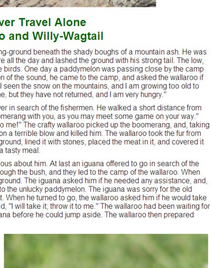
A Legend of the Wallaroo and Willy-Wagtail

Alone, on a rocky ridge high in the mountains, a wallaroo made his camping-ground beneath the shady boughs of a mountain ash. He was very old and infirm, and too weak to hunt for food, so he sat by his camp fire all the day and lashed the ground with his strong tail. The low, rhythmic thud-thud of its beating could be heard above the song of the birds. One day a paddymelon was passing close by the camp when he heard the beating of the wallaroo's tail. After following the direction of the sound, he came to the camp, and asked the wallaroo if he was in trouble. "I am very sick," the wallaroo replied. "Many times have I seen the snow on the mountains, and I am growing too old to hunt. My brothers have gone to the river beyond the hills to spear fish for me, but they have not returned, and I am very hungry."

The paddymelon was sorry for the old wallaroo, and offered to go to the river in search of the fishermen. He walked a short distance from the camp when the wallaroo, called after him: "You had better take my boomerang with you, as you may meet some game on your way." The paddymelon turned around and said: "All right, I shall take it. Throw it to me!" The crafty wallaroo picked up the boomerang, and, taking careful aim, threw it with all his strength. It struck the unfortunate paddymelon a terrible blow and killed him. The wallaroo took the fur from the dead animal and prepared the body for cooking. He dug a hole in the ground, lined it with stones, placed the meat in it, and covered it with flat stones. He then built a fire over it, and in a short time had cooked a tasty meal.

When the paddymelon did not return home, his relatives became very anxious about him. At last an iguana offered to go in search of the missing member of the tribe. He followed the tracks of the paddymelon through the bush, and they led to the camp of the wallaroo. When the iguana approached the camp the wallaroo was beating his tail on the ground. The iguana asked him if he needed any assistance, and, in a plaintive voice, the wallaroo told him the same tale that had been told to the unlucky paddymelon. The iguana was sorry for the old wallaroo, and offered to seek his relatives for him and tell them of his plight. When he turned to go, the wallaroo asked him if he would take a spear with him in case he met with any game on his way. The iguana said, "I will take it; throw it to me." The wallaroo had been waiting for this opportunity, and he hurled the spear so swiftly that it transfixed the iguana before he could jump aside. The wallaroo then prepared another meal as before.



One day passed, and yet another, but the iguana did not return to the hunting ground of his tribe. They sent a bandicoot in search of the iguana, but he met the same fate at the hands of the wallaroo. After waiting anxiously for the return of the bandicoot, the head-men of the tribe called a great council. When all the members were assembled together a headman said: "Many moons ago our brother the paddymelon left the camp before the sun was over the hills, and when night came he did not return, and his shadow has not darkened the ground for many days. The iguana went in search of him. He is a great hunter, but he has not returned. Yesterday the bandicoot followed in their tracks, but I fear the shadow of death has fallen over them. We must find them." Many suggestions were placed before the council, but none of them seemed practical. Then the willy-wagtail, who was a clever medicine man, spoke: "Long have we waited for the return of our brothers, and yet we do not hear their call. I shall follow their footsteps even to the shadowy hunting ground of death, but I shall return to you." The council consented to the willy-wagtail's proposal, but they were afraid that he would walk to the Land of Silence and never return.

Before dawn the willy-wagtail started on his dangerous and lonely journey. When he reached the summit of the mountain, he could see, far in the distance, the grey smoke of the camp fires wreathing slowly above the trees. With a sad but brave heart he continued his journey. After travelling for some time he heard the sound of the wallaroo beating his tail on the ground. At first he thought it was a wallaroo hopping through the bush, but, as the sound did not grow louder or fainter, he became suspicious, and approached the camp very cautiously. The wallaroo saw him approaching, and, calling to him, told him the same story as before. The willy-wagtail offered to seek his relatives for him, and, with this intention, started on his way. When he had gone a short distance the wallaroo offered him a boomerang. The willy-wagtail was very suspicious about his intention, and said: "Throw it to me; it will save me the trouble of walking back to the tree."

The wallaroo then threw the weapon with all his strength, but the willy-wagtail was prepared, and, as soon as the boomerang left the hand of the thrower, he jumped quickly aside. When the wallaroo saw he had missed his mark, and that his evil intentions were known to the willy-wagtail, he became furious, and threw all his spears and nullanullas at him, but failed to strike him. Then the willy-wagtail took the boomerang and threw it at the old wallaroo, and it struck him on the chest and killed him. He then skinned him, and prepared to cook his flesh, but he was too old and tough to eat. He now took the skin and returned to the camp. When he told the tribe of the fate of their brothers they were sorely grieved, but their grief was turned to joy when the willy-wagtail showed them the skin of their enemy. The wagtail was rewarded by being made a headman of the tribe.

The headmen now decided that blackfellows should never travel alone. As a mark of remembrance, wallaroos have always had a strip of white fur on their breasts. It is an indication of the boomerang wound that killed the old wallaroo of Mountain Ridge.

From: *Some Myths and Legends of the Australian Aborigines* by W. J. Thomas [1923]

This is a short collection of Australian Aborigine folklore, addressed to a general audience. The tales and folklore are recounted factually, but the book reflects the time in which it was written, so the reader should take that into account. The author apparently involved with providing aid to Aboriginal people, according to a relation of Mr. Thomas who wrote me. Thomas also wrote The Welsh Fairy Book. Beer in Sydney from 1793

Europeans landed at Sydney Cove on January 26th 1788. Seven years later, although some sources cite five years, James Squire a convict transported for seven years as a First Fleeter on the Charlotte, was the first person to brew beer commercially. He developed 'witches' ware made from the honey of local bees and bittered with Honhound but these were termed undrinkable. Our first beer, made from hops grew here.

Beer itself is an ancient brew and dates back to the 5th millennium B.C. where the is use is recorded as Mesopotamia and in Egypt. The chemical constituents confirmed barley beer to be was discovered in Egypt, a home for the Egyptian Goddess of Iran, where fragments of a jug, at least 5000 years old was found to coated with beerstone, a by-product of the brewing process.

OUR FIRST BEER- MAN WHO MADE IT PARRAMATTA RIVER BREWERY.
(By WALTER HIBBLE.)

The early hop-growing and brewing operations at *Kissing Point*, on the Parramatta River, is not the least interesting chapter of Australian history. The pioneer brewer was James Squire, who arrived in the First Fleet, and was transported for seven years for being indebted for their beer. I should Like to emphasise the fact that, at the time of which I write, it was considered among English-speaking people a fact beyond dispute That the daily consumption of a certain amount of fermented or spirituous liquor was indispensable to the preservation of health. That this was a complete delusion is apparent from modern enlightenment; but that such a belief existed among the early settlers must be borne in mind, or we shall hardly understand how it was that, almost concurrently with their efforts to procure food in the new land to which fate had brought them, they sought the means of manufacturing strong drink.

ILLICIT DISTILLATION.

Almost from the day' Colony began to make an advance in agriculture, must we date the 'commencement of 'illicit distillation'. So strong was the desire among the' first settlers to enter into this business that many of them held their land grants only long enough to comply with the conditions necessary to give them a possessory title, and then sold them, using the money thus obtained to purchase the plant required for the illegal occupation Hen were bent on following. There was indeed such a demand for ardent spirits that illicit distillation was carried on to an enormous extent, and the profits accruing from the sale of the liquor were very large. Rum was the favorite drink, and a certain amount of spirit was illegally produced. It must be remembered that at this date "grain" was a very convenient 'article' for use in exchange or barter,' and there are instances of men selling land, which they had literally won from the wilderness by their own toil, for a few gallons of rum. The head of the Lane Cove River and some of the swamps in the Rvde district were no doubt, most convenient places for carrying on this unlawful but exceedingly lucrative industry. It is said that honeybed beer. Or what was called beer, was made in the early days from the honey of the small native bee, which built its nest with this herb but, later on, the authorities seem to have deemed it necessary to place all brewing and distilling operations under control. From Hollis' Memoirs we learn that in 1802 he was arrested for distilling for his own use. Governor King, however, who had brought them, they sought the means of manufacturing strong drink. abandon the practice

PIONEER OF THE INDUSTRY

The first writer upon the business of brewing in a legitimate and open manner. was James Squire.. one of the pioneer settlers, at Kissing Point, 'who was undoubtedly one of the .most remarkable 'on of the early days. He started as a settler at Kissing Point. On July 22, 1796 he received a grant of there of 30 acres, and by industry and perseverance gradually acquired no less than 1500 acres. all in the vicinity of Kissing Point. It is difficult to ascertain the exact time to discover exacts what use Mr. Squire made of his first grant of land, or at what date it entered his mind that it was possible to grow hops successfully in these latitudes, but there is no doubt that as early as 1795 he brewed his first beer, but the bitter constituent used in its manufacture! was certainly not hops. My inquiries lead me to think that the first beer made public was in the month following the arrival of the Kitty with supplies from the Government Stores. large quantities of this herb having been brought from the colony Mr mederical purposes. It can hardly be contended that this first beer thus manufactured was of very high quality— in fact, it was not to be drunk, but was used for the purpose that a tombstone was once to be seen at Parramatta which bore the suggestive inscription: "He who drinks Squire's beer lies here."

The early brew to which the author of that epitaph no doubt refers was soon improved upon.

HOP-GROWING AT KISSINGPOINT

Mr. Squire was determined that beer of the first quality should be brewed in the colony, and there is no doubt that he succeeded. Nearly a quarter of a century he began to plant his own hops, and on the Government Gazette of March 16, 1806, the following appeared:—

On Friday, Mr. James Squire, settler and brewer at Kissing Point, waited on his Excellency the Governor at Government House with two vines of hops taken from his plantation, in full bearing. The bunches or cuttings were numbers of very fine bunches, and upon the two-year-old cutting the clusters, mostly ripe, were in proportion in weight supposed to weigh at least 1½ lb., and of a most exquisite flavor. As a public recompense for the unremitting attention shown in bringing this valuable plant to such a high degree of perfection, Mr. Squire received from his Excellency a cow to be given to Mr. Squire from the Government herd.

Mr. Squire soon had large fields of hops growing at Kissing Point, the fields extending back from the foreshores of the river- from a point a little to the eastward of the site of the present Rose baths. The brewery was built on the high land immediately above the row of rocks which runs out from Kissing Point, but it has long since disappeared, and where it once was there is now a cottage embowered among shrubs and flowers. The old brewery may still be traced, although the cottage is the brewery rather, keen out of the solid rock.

GOVERNMENT SUPERVISION.

Mr. Squire had to obtain a separate requisite for such an extensive business as that carried on by Mr. Squire came from. This it took me some little time to discover, but I at length satisfied myself that the author of Mr. Timothy Smull, that the water used in brewing was obtained from very large and deep wells cut out of the solid rock, which can still be seen. It must not be thought that Mr. Squire was allowed an altogether free hand in his brewing business. Government stepped in and kept a watchful eye on the quality of the beer, the price probably being to prevent undue competition with the liquor trade carried on by the officers under the Government of the day. It was not till later that the restriction was removed, and Mr. Squire then carried on an extensive 'business, as he had practically a monopoly of the brewing industry. Mr. Squire died in 1822, and his business was carried on by his eldest son until 1827, when he, too, died, and the brewery finally closed.

MR. SQUIRE'S EPITAPH.

Mr. Squire was buried in the old Devonshire street cemetery, and when this area was required for railway purposes his 'remains were removed to the Le Pervouse cemetery. So carefully was this done, that I was able with very little difficulty to discover the tombstone which, after being broken into three pieces, was finally erected — in Sackville Reach — to the memory of Mr. Squire and Christian his lived respected and died lamented.' - Also,

J. Squire, son of the above, Died 12th March, 1820 Aged 28 years.

HISTORY OF PARRAMATTA & DISTRICT. 'WRITTEN FOR ' THE ARGUS.' BY H. W. H. HUNTINGTON.

No. XVII. First Brewery on the River.

In Governor King's time Kissing Point was settled as Eastern Farms District, and among the settlers was a retired soldier named. James Squire, the grandfather of the ex-Premier, late James Squire Farnell. (a native of this district), and great grandfather of Mr. Frank Farnell as well. This James Squire, in 1795, built the first brewery in the district, and probably in the colony, on the land now known as Rose Bay. He planted considerable hopfields on the property, and for many years supplied the whole district with beer, and was one of the favourite beverages of the early colonists. In 1796, and for many years subsequently, **he sold his beer at 1s 6d** per bottle. This beer was brewed from tobacco corn properly malted and bittered with the leaves and stalks of the love-apple or Cape Gooseberry. From him he sent the Governor samples of his hops he was presented with a cow valued at £100. HISTORY OF PARRAMATTA & DISTRICT. **(1899, November 29)**. *The Cumberland Argus and Fruitgrowers Advocate(Parramatta, NSW : 1888 - 1950)*, p. 1. The oft mentioned Honeybees was brought here by the settlers for its medicinal properties in alleviating coughs. This was, and still is, derived from *Marrubium vulgare* (White Horehound or Common Horehound) a flowering plant in the family Lamiaceae, native to Europe, northern Africa and Asia that resembles mint It was also considered to aid digestion, soothe sore throats, and relieve respiratory ailments. Image and text sourced from Kohler's Medicinal Plants and Wikipedia

Mr Squires was not the only brewer in the Sydney area did make his beer famous, for so prolific were the brewers due to the notions that this was another 'medicine' as mead, and beers of different sorts were brewed from honey, that there was soon licences and encouragements to grow barley for Beer in Sydney 1810, as granted by the then Governor, Lahclan Macquarie.

GOVERNMENT HOUSE, SYDNEY, Saturday, 21st July, 1810.

THE principal Brewers at Sydney having represented that it would be a great accommodation to the Labouring People and to the Lower Classes of the inhabitants in general, to have plenty of good wholesome Beer brewed for their drinking; and permitted to be retailed to them at a moderate Price. His Excellency the GOVERNOR, in order to their convenience, as well as to encourage the Settlers throughout the Colony to grow Barley, has been pleased to direct that Licences be granted for Licences to be granted to Fifty Persons at Sydney to vend and retail Beer on the Terms stipulated in their respective Securities; namely, each Person paying an annual Tax of five Pounds for his licence, and finding Security, himself in Twenty five Pounds and one Surety in the like sum, to Keep an orderly House and not to sell Wine or Spirituous Liquors. Any Person therefore who shall be desirous of obtaining such Licence, may Apply for it without a regular Licence may depend on being prosecuted with the utmost Rigour of the Law. The Names of those Person who have received Beer Licences at Sydney, are now Published for the Information of all concerned.

By Command of His Excellency,
J. T. CAMPBELL, Sec.

SALVATION BY A BREWERY
By A Staff Correspondent

When Australians were fast going to the dogs 150 years ago, Governor Philip Gidley King, in one of the notable paradoxes of Australian history, tried to save them with beer.

"The greatest blessing that can be bestowed on a colony," Governor King wrote when reporting the opening of the first public brewery in Parramatta on September 15, 1804.

Governor King spoke with fervour and relief because he hoped beer would "greatly, if not entirely, do away with the inclination for spirituous liquors, which keeping The inhabitants in a state of beggary." He had conceived his plan of Salvation in 1801. But he had to wait impatiently for the arrival of a brewing plant to come to England for the brewery at Parramatta

"The prices put on the beer, "place it within every person's reach," he said.

They certainly did,at 1 s gallon in the buse's own cask at the brew house, payable in wheat, barley, hops, casks, or iron hoops.

King, Governor fixed the price of taverns at 3d a pint, and allotted a quota of five gallons a week for military and civil officers, three gallons for superintendents and sergeants, and whatever was left for settlers. His order announcing the beginning of brewing promised a free distribution when supply exceeded demand.

The brewer, Thomas Rushton, is seven weeks raised his weekly output from 540 gallons to 720 gallons. But the public thirst outpaced him, and the fulfilment of the Governor's promise is still awaited. The first brew was not worthy of a sample shipment to England because the brewer had to use wheat for malting. When early brewers had no hops they used horehound from the colony's medical stores to make beer bitter. Governor King reported hopefully that Rushton knew roots and leaves, which were substitutes for hops.

GOVERNOR KING'S reform was strenuously opposed. The military garrison, the New South Wales Corps, held a monopoly of the sale of liquor, and in 1807 the British Government disbanded it in 1810 after it had invaded King and in 1808 deposed Governor Bligh of New South Wales by the Rum Rebellion.

Governor King prohibited imports of spirits. But American Vessels, loaded with spirits, kept turning up in Sydney Cove with what he called "the old exclude of receiving inquiries, saler etc." He once sent away a ship with 10,000 gallons of spirits.

"SQUIRE, who once sent an employee swimming after a barrel of beer he allowed to roll into the Parramatta River, has his place in the history books. Which was a pity, because Governor King's brewery was the first step in the development of Australia's rich and varied wine scene. Image courtesy of the Australian Dictionary of Biography.

Governor King's plan to combat rum by brewing beer took a quibling, records the author of the article in these two expressive sentences. "He Vilte Wiith to Le Here. Drink Squire's Beer."

He was the Whitehead of New South Wales," another account said, likening him to an English politician, a London brewer's son, who sponsored a Poor Law Bill.

His beverage has a general good name throughout the Colony, and he himself is universally respected, especially as the friend and protector of the lower classes of settlers."

Squire came to Australia in the *First Fleet* in 1788. He was the first to cultivate hop plants in the colony, and Governor King rewarded him with a cow from the Government herd. When Squire died in 1822 he had increased his original 30 acre holding at Kissing Point to 1,500 acres, and also owned a 'house in Castlereagh Street, Sydney. His grandson, James Squire Farnell, was Premier of New South Wales in 1877-78. SALVATION BY A BREWERY. **(1954, June 4)**. *The Sydney Morning Herald (NSW)* : 1842 - 1954), p. 9. Lighthouses as Watchtowers – Lighthouses as Peoples

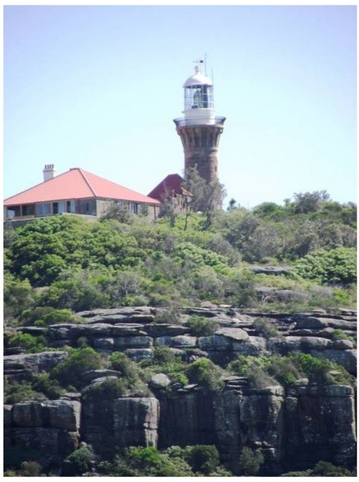
In my eyes and through my eyes I see an Ivory tower in the distance. It's been stuck in my eyes for three days now, beaming out its light, catching in my turning until I spend a moment turning to see. Even when its dark and fog has closed in I see it shining on the ridge of the hill opposite. It hovers on the horizon, a pale and royal blue-white column, hazy among the stars and landmark gleaming during the salty day. I watch it, take note of its changing hues. I think about walking there sometimes, but stand opposite looking, watching, seeing. It places white light here, where it can be touched.



Another and another appears between the treetops and line of ocean suddenly sky until there are watchtowers on all hills. Some are spires into the sky, some domed, others earth proportioned pipes of Nature humming rock into earth into tree bird breath and air into ever-song. Many have gold lit windows making them stout candle sights but all are from Nature, weaved together, unable to rise above the surface without being places of Higher substance, clearer air, purer energy. Perhaps they're metaphysical watchtowers alike temple, church, shrine places, with holy water as dew pouring from the 'connected to heaven' essence in the flowers growing from their hallowing grounds. I was only going to get to see them once I grew into this way of being, had the veil that hides them lift from my eyes. Perhaps they are other people, strong as steel when needed, tender as flowers all the rest of the time, throwing up columns of their heavenly beamings. People have been Watchtowers through the Ages, someone looked to for the Light they bring, their times their 'Keep'. Lighthouse Peoples known as one who gathers and emits light.

Cooler daylights show this watchtower to be two separate houses just below the hilltop, an arched doorway last night's yellow-lit old world window, the tower of light that rose above, making them one, melded from a mix of sunset, salt laden sea-haze, low white clouds and moonbeams.

Salt draws other shards of rainbows out of coastal air. During summer the humid sea haze and the small summer breezes running in small trillings or soft buffets up all the green coastal hills, overlapping sea with earth, make small clouds that grow larger appear above where cool wet ocean air meets sun warmed headland. They hover in turning twirling white arcs and elongated threads. Over higher thicker headland more stolid cumulus appear and hover without being lifted to the hotter sky where they may evaporate back into the blue. As Signs of they're signalling what draws through the larger sky, and even the larger season, on either side of each moment of each day. Then the places where watchtowers appear during other conditions, to reveal all else there, appear to be an angelic extension of the concord and exultation between sea, air and land. Genius of place is Spirit of Place and this must colour and design each hill's watchtower variation.

Just yesterday I went up the hill to look at what was flowering around the watchtower and found five plants in bloom. Strongest and most profuse were two white varieties and one dubbed 'black', black and white. One white flower-ring has a meaning of how we are all one here, the other a meaning being of 'flow', the last a meaning of being a conduit for messages from heaven. Imagine yourself what this place among the places was being physically, mindfully, in feel, in essence-full dews and in spiritual terms. It is apt it is a watchtower place but also you may ken the particular sense of sacred it was being on this afternoon. In other seasons or even the very next morning after a light or heavy rain, other flowers of varying colours will bloom together, changing by shifts and degrees what comes out from and establishes in each part of each season meets what is needed in mind, body and spirit. Remember birds, of air, ants, of earth, and all the made from water marsupials who roll in the dew and eat the tender roots, love the flower nectars. They know to sup what each day brings. Remember, this is a spiritual Garden, planes and beams knit all around us, are to be imbibed, to be breathed in, to fill our senses with purest meaning, with the living, ongoing and gethering Converse of discourse.

Seeing what's right before your eyes, all the signs, and what they are signalling, from single leaf to tree crown, as much as the airs above them, as well as inner, inner, in, is keeping your eyes open and finally allowing them to open what is before you and see what then comes to your eye. The 'tune in' is no 'drop out', it is, in fact, tuning in your full beaming. Attune yourself, attune to, do the work, sense the truth. Rock back and forth, hip to hip, to sense uprightness in you, in your spine, until the white beam of spiritous soul thread at your core springs up, puts on your metaphysical body so all slows, stills, attains its true dimension and shape. This then brings on your spiritual body, and the white beam of spark running through you, up through your crown. There you are aligned, part of, and the pure and truth is clear, clearer clear.

Not too long ago people crucified other humans on trees until tree and body breath expired. Smirkers nailed thorns through velvet into a 'pagan' world that spoke through us, that we conversed with in spirits of water, earth, air and fire, with fairies, gnomes, elfin, dominions and angels of trees, of mountain, of place. This speaking the opposite of death to bring forth Spiritual brimming in sky and earth withdrew as common practice, openly acknowledged adoring. We did not withdraw, not after our first drawn breath. We were not locked outside the realer world, unable to see Form manifest cells all brimming themselves from light, and ourselves as form too, spiritous energy knit, in the first instance, from one constant spark. Made from atoms of light that are empty beyond the intention filling them, the air then the solid in them, are we. The empty, the proved, All thinking they can, thinking they can, be, sensing they are already winged in motion. Invisible wings are part of our construct. Wings on your feet, giving wing to your heart filled heart, or soaring emotions, earning them feathers, giving lift to your voice from the flesh lung wings placed deftly inside helps you Breathe hallowed breaths and speak, even Speak in Word, in Names. In your truer names is your other 90%.

John Gordon

Honest Long John Gordon is the modest man this gentleman is known as up and down Pittwater. If you want my opinion, ask it. If you don't like it, that's fine, we'll still speak. Or disagree. We will debate heatedly and then go to the bar, together, for a drink.

A member of the Mona Vale Hospital Auxiliary, the gentleman who has taught many of our premier sailors, from the seventies through to the decades in Sailability at the behest of Kay Cottee, John Gordon has also been a driving force in the Rotary Club of Pittwater and has been instrumental in securing Rotary land for its running on the N.S.W. Heritage Council Register works to sandstone.

What you may not know is that as an 18 year old he sailed in the inaugural Sydney to Hobart yacht race or has served as one of the longest running Commodores of the Royal Motor Yacht Club of Broken Bay. Department, has he earned a few charges? Definitely!

This week it is our great privilege to share a small insight into another Pittwater legend, John Gordon.

When and where were you born?

56 years ago, last January 1957! I was born under the guns at Middle Head. My father was the Sailmaker, Seamaster, the Master Gunner. I don't remember that but he told me about it much later! I lived and he was Sailmaker, Sergeant and the first gun at Middle Head.

Where did you grow up?

I grew up in Watson's Bay, at Camp Cove. The landscape was very similar to what it is now, except that there was no Gap Park and the Gap was all up around there before 1936, we lived in barracks until 1936 when dad retired and left the Army. My mother died in 1933, I did remember her. I had a sister who died in infancy and another sister who died at 18 months. My background Gordon being Scottish, that's as far back as I can go. My mother was Kelly.

When did you get of the Army and live in North Sydney and then we lived in Homebush.

What was Homebush like in the late 1930's?

We lived in Homebush West, which was rural then. The nearest station was at the end of the street at Flemington. This was the main Western Railway, the fish and chips, the Blue Express went by at that time. I grew up near there and I had a rural background while there. I then lived in Bondi as a teenager. This was a good place, we lived just down in the North Bondi Surf Club as a junior.

Where did you go to school?

I went to Homebush Intermediate and then I got a scholarship to Christian Brothers School in Lewisham. There were three scholarships and only two boys got them.

I then got a bursary on my sixth class to go to boarding school at St John's College in Wollongong. My auntie, who was a teaching nun, organised this but it was a bit too far away. My dad organised with a friend who couldn't send his son to the Christian Brothers there, and I went to the Intermediate. the old Intermediate. I got a bursary to Christian Brothers College at Goulburn, so I was brought up to the Christian Brothers. I was a staff boarding school at Goulburn for three years, for the first three years I lived with my grandmother until the dead and then with my auntie at Homebush.

What did you do after school?

I always wanted to muck around with chemicals. I had a good Chemistry Master and the first job I got, my father got it for me as he was Sailmaker to the Navy, was at the Explosives Factory at Villawood. I was a Chemist there and I was there for a couple of years before I went to Sydney Uni. Saw my father, seeing as Dennis Smith had retired from NSW and being ambitious and wanting to speak, you made a good case for getting a good education, and there Gordi got a good education. But I wasn't successful as a Pharmacist.

I have a number of qualifications and one of these is in Ph.C and that is a Pharmaceutical Chemist; they're the blokes that wear the white coat. I was a Ph.C failed with honours. I failed the Pharmacy Board's exam so I could work in the Pharmacy at Ettalo's, a beautiful pharmacy, but I couldn't run my own shop.

Ettalo's Brothers Limited was the premier manufacturer of drugs, chemicals, surgical equipment and boxes from the mid 1880's. Although the company became Ettalo Brothers Limited in 1919, it was founded by Australian pharmacist Ettalo Gustavus Ettalo and partners to create Drug Houses of Australasia in 1908; the pharmacy in York Street and boutique, O'Connell Street Sydney still exists today. Photo: Powerhouse Museum, Sydney, Ettalo Collection, 1/1 York Street, Sydney, N.S.W., Inside Stock, 2/2004, courtesy Stella Library of NSW

A job came up, and being adventuresome, I got a job in Malaysia working on the tin dredges from where Penang is, if you go one the railway up from Singapore, go right through to the border, a place called Tapoh - it was British-Malays and they are still big tin producers; they're world famous. So I got a good job there working on the tin dredges surveying where the tin was going to be; I was a prospector but I was also a Chemist and I was responsible for the assays. I was there for two years and I had a wonderful time and I got out of there. I did a Technical College as a bottle washer for Fritt Crown – at Lab Attendant. I've written my memoirs, I haven't published them, and they are called "From Lab Boy to Lecturer."

In my professional work over the years I was on the N.S.W. Heritage Council Environment Restoration Committee. With another fellow we worked on every historic public building in sandstone in Australia bar one or two. Sandstone was my thing. I have a geological background, I've done a lot of work in that area and I've been on the Heritage Council for 10 years. I've been on and was promoted to the Environment Committee. With another fellow we worked on every historic public building in sandstone in Australia bar one or two. Sandstone was my thing. I have a geological background, I've done a lot of work in that area and I've been on the Heritage Council for 10 years. I've been on and was promoted to the Environment Committee. I have three very short bottles brought to here which I'm an advocate and my fee to go into them is an expensive cosmetic and one bottle of a logo pot. The three bottles I brought here I have brought here as examples of bottles invented in their manufacture and Sarah Andrews, Sydney Town Hall and the QVB.

I've always had a great interest in rocks and geology. I did some work in Kuring-gai National Park on the aboriginal carvings. I'm an Honourable Ranger, and I've worked to have the Wash Tank Fire Trail closed and rehabilitated. I've looked at the aboriginal carvings (Petroglyphs). That was a project Dr. George Gibbons and I did with Sydney University and Australian Museum.

What is your favourite rock of all time? Or one which you've found particularly interesting?

The Sydney Town Hall. They've been doing work to clean it lately, you've seen cranes over it. I worked for my good friend and boss, Dr George Gibbons, all the sandstone in the Parliament are under the terms of my contract. So I've been the sandstone specialist for years.

So you went all over Australia doing that?

Yes, I was lucky to go and do months restoration in Europe through the Building Research Establishment of CSIRO to do particular work on planning and restoration for sandstone buildings there and I was in Scotland, in the UK, England, Scotland and Wales and three months in Europe. I was in Germany where there was the stage three of the College of Building, and I was in Switzerland, I was in much now, and that's what I spent most of those months doing work and visiting and looking at buildings.

I started my diploma at the Tech, that's where I met my dear wife, I got a job teaching there and we were taken over by the University of Technology which is the University of NSW. I was a Senior Lecturer in Chemistry, and I was in Applied Chemistry, and I had an assistant, I got a job in the Metallurgy school at Kensington and from there I came back to teaching at the Tech. The University of Technology was then set up or formed. I was a Senior Lecturer in Chemistry and I was responsible for the Chemistry laboratories. I was in Applied Chemistry, I was in the Metallurgy school at Kensington and from there I came back to teaching at the Tech. The University of Technology was then set up or formed. I was responsible for the Chemistry laboratories. I was in the Applied Chemistry section and

Barrenjoey Lighthouse – The Construction

As early as 1855 a basket was reported to be raised to shine a light but all trace was bodied around the sometimes treacherous headland of Barrenjoey. This classic stone tower from a wooden structure as early as 1843 on the headland on the northern side. Customs Station was opened. From here ships were monitored as they entered or left the 'port' of Pittwater.

Plans were prepared for a new lighthouse to be built on Barrenjoey Head by Colonial Architect Mortimer William Stewart a master mariner. So the site in 1920, two wooden structures were erected on the headland. Named the Stewart Towers after this gentleman they were demolished in 1932 when the present lighthouse was brought, most of which was prefabricated.

NOTICE TO MARINERS — From Farrea Hixon Superintendent of Pilots, Lights, and Harbours. Sydney, 8th July, 1868

On and after Monday, the 20th July, two temporary fixed lights will be exhibited on Barrenjoey, the inner south headland of Broken Bay, from 7 p.m. to midnight. The lights will be shown from the two wooden towers recently erected. The towers are now being 'lit', and the lower one, 372 feet above high-water mark, and three miles from the sea, will be distinctive in seaward of about 9 miles.

THE NEW LIGHTS ON BARRENJOEY. **On Tuesday last Captain Hixon, the Superintendent of Pilots, proceeded to Broken Bay in the steamer Thetis to inspect the new lights,** and **which were lit up for the first time on last Monday night.** He found that the towers were completed, and the lights exhibited from them, in accordance with the plans and specifications which had been approved by the Government. The towers are built of stone, each from the quarries of some capacity that had been obtained on the spot. The lower one is 372 feet above high-water mark, and the upper one 472 feet above high-water mark, both of which are lighted with two lights, one of which is seaward of about 9 miles, and the other 12 miles. The lights are fixed, and not revolving, and are lighted with kerosene oil. The lights were first exhibited on Monday night, and they were found to be of the power and character specified in the plans and specifications. The lights are distinctive, and will be of great service to navigators. The towers are built of stone, each from the quarries of some capacity that had been obtained on the spot. DEATH OF MR. ROBERT STEWART. General regret will be awakened by the announcement of the death of Mr. Robert Stewart, which occurred at the representations of East Sydney in the Legislative Assembly for many years. He was a native of the colony, and was one of the most true hearted and consistent of our Australian-born patriots. Having been deprived, in early life, of the advantages of a liberal education, he was compelled to struggle against the difficulties of fortune, and to overcome the difficulties of his position by the sterling strength and power of his own character. He entered a legal career in the colony in the year 1834, and, after taking an interest in the public affairs of the city and of the colony, he gradually became well known and trusted as a politician. For years he was a member of the Sydney Corporation, and he was elected Mayor of Sydney in the year 1851. He was also a member of the Legislative Council, and represented the electors who form to a more than ordinary degree the confidence of their fellow-citizens. He was a member of the Executive Council, and represented that electorate for several years. As a member of Parliament, he took no prominent action in the conflicts of party, but devoted his attention to the practical questions which affected the welfare of the community, and to the development of the resources of the country. He was a liberal and enlightened politician, and he was the friend and supporter of all such men. Mr. Stewart died on the 9th June, after a few days illness. DEATH OF MR. ROBERT STEWART. **(1875, June 22)**. *Clarence and Richmond Examiner and Grafton & Ulmarra Advertiser* (1866 - 1889) , 1859 - 1889), p. 2. Retrieved from http://nla.gov.au/nla.news-article12788599

The Stewart family lived on promised land grant of 200 acres at Broken Bay on the Hawkesbury River and left in 1831 before it had been surveyed. Robert settled by 1835 and was appointed as a cabinet maker and owner of a cedar yard. He eventually established a family claim to a grant at Broken Bay in 1850.

In the years preceding this

Among the items in the Colonial Architect's Department are the following: £3500 for additions and improvements to the Lunatic Asylum at Parramatta; £1000 for a new Court House at Bathurst; £1000 for a new Court House at Maitland; £1000 for a new Court House at Newcastle; erection of a residence for the Attorney-General; and the surrender of a portion of the grounds attached to the Supreme Court House, in order to provide for the widening and improvement of the approaches to the building. COLONIAL ARCHITECT. **(1851, December 13)**. *The Sydney Morning Herald* (1842 - 1954), p. 2. Retrieved from http://nla.gov.au/nla.news-article12120330

Until deserted the day of

LAYING THE FOUNDATION-STONE of a NEW LIGHTHOUSE at BARRENJOEY. *(BY OUR OWN REPORTER.)*

The ceremony of laying the cornerstone of the new lighthouse at Barrenjoey was performed to-day, by Miss Rosa Barnet, daughter of the Colonial Architect, and everything connected with the event passed off in a highly satisfactory manner. The contractor's result invitations to several ladies and gentlemen to be present, and among those who responded thereto were Messrs. J. S. Farnell, E. Greville, and J. Barnet, C.E., Mrs. Barnet, Miss Barnet, Miss Greville, Miss Farnell, Miss Hixson, Miss Bowman, Miss Bell, Miss Fell, and Captain and several other ladies were also present. The steamer Thetis left the Circular Quay at a quarter past 7 o'clock, and reached the Manly Beach, whence they were to go overland in vehicles. The morning was somewhat cloudy, and the harbour correspond with a fog. Before the steamer reached Manly, however, the fog had entirely disappeared, and the sun made an effort to beam forth through the somewhat sombre sky. Arrived at Manly, three coaches were found in waiting, which were quickly filled, and a start was then made for host Corlett's Hotel, Narrabeen, where the party arrived at about half-past 10 o'clock. Here they found a capital lunch laid out in the dining-room, which reflected credit upon the host and his staff of waiters, in order to this repast having been duly partaken of, the toasts were proposed, and the usual complimentary toasts of the occasion. The first toast was that of the Queen, which was received with the usual enthusiasm. The second toast was that of the Governor and Ministry, and the Colonial Architect and Mr. Barnet, C.E., responded to the toast. The third toast was that of the Army and Navy, and Captain Cadell responded to the toast. The fourth toast was that of the Ladies, and Mr. Barnet, C.E., responded to the toast. The fifth toast was that of the Contractors, and Mr. Farnell responded to the toast. The sixth toast was that of the Press, and Mr. Greville responded to the toast. The seventh toast was that of the Visitors, and Mr. Barnet, C.E., responded to the toast. The eighth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The ninth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The tenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The eleventh toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twelfth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The fourteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The fifteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The sixteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The seventeenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The eighteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The nineteenth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twentieth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-first toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-second toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-third toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-fourth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-fifth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-sixth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-seventh toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-eighth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The twenty-ninth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirtieth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-first toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-second toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-third toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-fourth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-fifth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-sixth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-seventh toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-eighth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The thirty-ninth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. The fortieth toast was that of the Chairman, and Mr. Barnet, C.E., responded to the toast. Virtual excursions bringing Australia to the classroom

A new web portal will take students and teachers directly to a number of iconic Australian institutions through a partnership developed between Virtual Excursions Australia and arts, cultural, science and education organisations.

Minister Assisting for Innovation and Industry and the Digital Economy Senator Kate Lundy today launched Virtual Excursions Australia (VEA) at the Interactive Technology in Education Conference (ITEC 2013) at the Sydney Opera House.

"The Virtual Excursions web portal is an initiative that will help transform education in Australia and ensure it is an experience that goes far beyond the traditional classroom walls," said Senator Lundy.

"Not all locations are accessible to all students; all of the time and virtual excursions allow classrooms to be transported to some of Australia's most important arts, cultural, science, and education institutions.

"There are some fantastic institutions across Australia that have joined the program to open their virtual doors to classrooms, including the Australian Museum, Sydney Opera House, and Questacon.

"The Virtual Excursions project will be particularly useful for those in regional and rural Australia where research has found that for people in regional centres the relative cost of excursions ranges from 20 to 100 per cent higher than in capital cities. For students in remote areas that figure can be 200 to 500 per cent higher.

"Teachers will have access to tools to book and plan virtual excursions through the Virtual Excursions Australia website which acts as a portal for teachers wanting information about video conferencing events and content providers.

"I applaud Virtual Excursions Australia and the institutions involved who are helping to bring the classroom of the future to students today," said Senator Lundy.

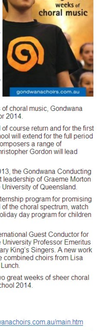
Gondwana Choir

Singers! Composers! Conductors! Applications ARE OPEN for 2 unforgettable weeks of choral music at **National Choral School in Jan 2014. Apply by August 16!**

Held annually, National Choral School places more than 300 of Australia's finest young voices, composers and conductors with expert artistic talent including Lyn Williams OAM, Carl Crossin OAM, Paul Holley, composers Paul Stanhope and Christopher Gordon, and international guest conductors Simon Carrington (Yale University Professor Emeritus and founding member of the legendary King's Singers) for two weeks of rehearsals, workshops and performance.



January is a special time for all Australians who share a passion for choral music. Gondwana National Choral School provides an ideal environment for conductors, composers, administrators, teachers and, of course, singers to indulge their passion and scale new heights in choral composition and performance.

Providing opportunities for all lovers of choral music, Gondwana Choirs has expanded its activities for 2014.

Our four dynamic national choirs will of course return and for the first time, the Gondwana Composer School will extend for the full period of National Choral School offering composers a range of experiences. Paul Stanhope and Christopher Gordon will lead Composer School in 2014

Following its successful launch in 2013, the Gondwana Conducting Academy will return under the expert leadership of Graeme Morton AM, with continued support from the University of Queensland.

We will also be introducing a new internship program for promising arts administrators. At the other end of the choral spectrum, watch out for Gondweenies, a great new holiday day program for children aged 8-12.

I am thrilled to announce that our International Guest Conductor for 2014 will be Simon Carrington, Yale University Professor Emeritus and founding member of the legendary King's Singers. A new work has also been commissioned for the combined choirs from Lisa Young, founding member of Coco's Lunch.

I look forward to seeing you all for two great weeks of sheer choral joy at Gondwana National Choral School 2014.

Lyn Williams, OAM

Artistic Director & Founder

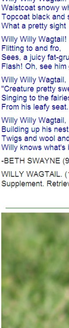
LET'S READ NATIONAL EARLY LITERACY CAMPAIGN



The Federal Government's Department of Education, Employment and Workplace Relations has funded the Australian Literacy Foundation Institute $1 million over 12 months to implement a Let's Read National Early Literacy Campaign. Building on existing evidence-based programs and leveraging off the designation of 2012 as the National Year of Reading, this campaign aims to develop and generate national, integrated early years literacy promotion and support.

The Let's Read Campaign engages families, professionals and communities to promote reading with children from birth. Sharing books from birth helps children develop the skills they will need when it's time to start school. Let's Read anywhere, anytime is the national campaign call to action for families, carers and early childhood education professionals to share rhymes, songs and stories and books every day. The campaign uses a multi-tiered approach to engage families, professionals and communities in a range of messages relevant to children's early literacy development from birth to five years.

Let's Read was developed by the Royal Children's Hospitals Centre for Community Child Health, Melbourne.

DOWNLOAD A FREE READING PACK!

These reading tips and tools support families to share rhymes, songs and stories with children anywhere, anytime from birth to five years.

Mona Vale Library - Young Runarounds!

Mona Vale Library has expanded the books available through their 7-day loan collection of new titles for younger readers. These are all books which are currently deemed 'hot' in local book stores. To see the wide range of titles available have a look HERE.

Children's Storytime at Mona Vale Library

Mona Vale Library offers storytime for pre-school children every week during school terms. Children and their carers come and participate in a fun sing-a-long with our story teller as well as listen to several stories in each session, followed by some craft. Storytime is held in the Pelican Room of the library in front of the service desk. Storytime is free and no bookings are required. Storytime Sessions

Tuesdays 10.00am - 11.00am
Wednesdays 10.00am - 11.00am
Thursdays 10.00am - 11.00am

WILLY WAGTAIL

Willy Willy Wagtail!
Waistcoat snowy white,
Topcoat black and shiny,
What a pretty sight

Willy Willy Wagtail!
Flitting to and fro,
Sees, a juicy fat-grub,
Flash! Oh, see him go.

Willy Willy Wagtail,
"Creature pretty sweet!" . ,
Singing to the fairies,
From his leafy seat.

Willy Willy Wagtail,
Building up his nest;
Twigs and wool and horsehair,
Willy knows what's best

-BETH SWAYNE (9).

Virtual excursions bringing Australia to the classroom

A new and innovative way to bring Australia's rich history to life in classrooms, Australian Geographic has launched a series of virtual excursions, which will be delivered live to classrooms around the country.

Australian Geographic Virtual Excursions, in partnership with Questacon, Scientia Events Australia and Sydney Observatory, will be delivered live to classrooms around the country from Questacon in Canberra, Australia's National Science and Technology Centre, and Sydney Observatory.

"The Virtual Excursions will provide a rich interactive live web-based experience for students and teachers, and will be delivered by experts from Australia's leading science and history institutions," said Australian Geographic Publisher, Nick Mooney.

"Not all students are accessible to all students, all of the time, and we're excited to be able to bring the Australian Geographic brand to life in classrooms around the country, no matter where they are located."

"There are some fantastic institutions across Australia that have been incredibly generous with their time and expertise in helping us develop the Australian Geographic Virtual Excursions," said Mooney.

"The Virtual Excursions program will be particularly useful for those students who live in remote areas and may not have the opportunity to visit a capital city where the national institutions are located. We've also had a lot of interest from schools in regional areas that have to use the 1300 to 000 sort of digits!"

Australian Geographic Virtual Excursions will be delivered live to classrooms around the country from August 2015. The Excursions are a current for teachers seeking information about online excursions, and can be booked online now.

Henry Ford and Ed Sizzler' Huff in Ford Sweepstakes' race car, Detroit, Michigan, 1901

This is Henry Ford's first race car. Steering is done by a tiller and not a wheel. Ed Huff, a bicycle racer, was hired to drive the car in competition. Lacking any real experience, Huff was unable to keep the car on the track and crashed into a fence. Ford was also inexperienced auto mechanics and driver from Cleveland, Tom Cooper, was hired to drive the car. Cooper was successful and won the competition. Ford's car was a success and he went on to found the Ford Motor Company. Ford's cars were known for being reliable and affordable by most Americans. Ford also developed the first moving assembly line for automobile production in the U.S. (9 No

BUNNINGS JOB APPLICATION

This is an actual job application that a 75 year old pensioner submitted to Bunnings Warehouse. Here is how he filled out the form:

NAME:

Mary Smith (unless Granny Backed)

SEX:

No idea, but I am looking for the right woman or at least one who enjoys camping.

DESIRED POSITION:

Anything that pays money or Managing Director. But seriously, whatever is available to start.

HOURS AVAILABLE TO WORK:

24

PREFERRED HOURS:

11:30 - 3:30 p.m. Monday, Tuesday, and Thursday

DO YOU HAVE ANY SPECIAL SKILLS?

Yes, but they're better suited to a more intimate environment.

MAY WE CONTACT YOUR PRESENT EMPLOYER?

If not one, would be hard!!

ARE YOU AVAILABLE FOR ALL CONDITIONS THAT WOULD PREVENT YOU FROM STARTING UP TO time ?

Of what?

DO YOU HAVE A VALID DRIVER'S LICENSE?

Not anymore, but I can still get around pretty well.

HAVE YOU RECEIVED ANY CITATIONS FOR OUTSTANDING RECOGNITION?

I'd have to review a number of the Reader's Digest Timeshare Five Star Awards to be sure.

DO YOU SMOKE?

Like fire, all - no 2 cents, plz!

WHAT WOULD YOU LIKE TO BE DOING IN FIVE YEARS?

Living in the Bahamas with my trophy wife and collecting my supermodel with a big check and who thinks I'm the greatest thing since sliced bread.

Actually, I'd like to be playing more golf.

NEAREST RELATIVES:

I'd love.

DO YOU CERTIFY THAT THE ABOVE IS TRUE AND CORRECT TO THE BEST OF YOUR KNOWLEDGE?

Um, sure. Actually, I'm not sure of anything.

After sending many job ads as Brumbys "Greeter", a good fit for his personality, Ian Brumby finally got a job interview. He was told to call the day on the job at a very bad, unattractive, mean-acting Bogan Bunnings store. Ian was told to ask for the Manager and to tell him that he was a Greeter.

As I had been instructed, I was pleasantly, "Good morning and welcome to Bunnings."

The woman stopped sorting long enough to say, "Do they sell gifts here?" The clerk went to a file, pulled out a sheet of paper and said, "Yes, we have a number of gift items in stock."

I replied, "The mother-in-law stopped. Marian I just couldn't believe someone could be that stupid. Then I realized that she was serious.

If I had one, would be hard!!

DO YOU HAVE ANY MEDICAL CONDITIONS THAT WOULD PREVENT YOU FROM STARTING UP TO time ?

Jazz for Cows in France!

It's Bastille Day here in France and the cows are getting ready to celebrate. Yes, they, too, like to party! Especially the jazz they'll hear. It is said that jazz is the favorite music of cows. Why? Because they like the consistency of the rhythm and the sweetness of the strumming of the guitar. Plus, they like the sound of the saxophone because it reminds them of the mooing of other cows. Cowbells are also a symbol of the uprising of the French people in the 18th century, so the cows are very much in the mood for celebrating.

The school and largest oyster military parade in Europe is held each year in the picturesque seaside town of Marennes-Oléron in the Poitou-Charentes region of France. Over 1,000 students participate in the parade.

A History of Antarctica
By Stephen Martin

Antarctica is the coldest, driest, windiest and highest continent on earth. Its ice sheet contains 90% of the world's ice and 70% of the world's freshwater. Antarctica is also the only continent with no indigenous human population. Yet it has a long and fascinating history of human exploration and discovery.

Budget Rest Areas Around Australia

This guide will be ideal for those who are planning a trip around Australia's major highways.

2013 Size Challenge – Australia

Turning up the heat - new rules & record entries

This year's new Guide Book Size Challenge will be the most comprehensive with all entries being measured by the Australian Bureau of Statistics to be the Australian Standard for Guide Book Size Challenge. Entries will be measured to the nearest millimetre and will be required to be hand produced with no machine assistance. Entries will be required to be hand produced by the new size police and measured by the Australian Bureau of Statistics.

Entries will be required to be hand produced using only the latest new technology and innovation by creating three new hand produced entries. Entries will be required to be produced using the latest technology through innovation and creativity. Entries will be required to be assessed post results and at the same time receive new powers. Their powers will be assessed by the Australian Bureau of Statistics. Entries will be required to be produced using the latest technology and innovation.

Volunteers Wanted

Volunteering for the Book Size Challenge is not like volunteering for any other event. Volunteers are away from home for extended periods of time. They are required to be flexible in their availability and have a passion for the environment. Volunteers will be required to be flexible in their availability and have a passion for the environment. Some many rooms and a lifetime of memories.

Site volunteer wanted

The event relies on its volunteers and seeks a mix of experience and skills to help with the event. Some of the skills and experience available are:

Flight Radar 24.com Cr: H.A.G

Have you ever wondered where that plane flying overhead is going and what type of aircraft it is? Flightradar24.com can help you find out.

It can watched on my laptop the plane whose nearest track I used was two and very flowers from all the information and also the nice. This is definitely a keeper.

Flightradar24.com is a free service known area when no one flies there and will use flying to cover and to the area that is not flown over. The controller is over and very fans pursuit.

Flightradar24.com is a free service that tells you who is flying and where they are going. It is a great way to see what is happening over your area in the air.

The site is very much like an air traffic view. In the left hand column, there is a list of airports. Click on one and you will see a list of all aircraft activities. The view is what the traffic management people see when they are controlling the airspace.

Click on an aircraft and you will see its flight number, altitude and aircraft code. The site sometimes gets overloaded.

Flightradar24.com is a free service that tells you who is flying and where they are going. It is a great way to see what is happening over your area in the air. This is definitely a keeper.

Home Care Update - 7 July 2015, Fed. Govt. Media Release

The Australian Government Home Care Providers have been announced today by Minister for Mental Health and Ageing, Senator the Hon Fiona Nash. Here is a part of the media release (with some spam and bolding).

A total of 2,825 new Home Care packages will provide aged, veteran and disability care to people living at home in the Central Coast, Hunter and Illawarra regions of New South Wales.

Home Care Packages are specially tailored to older people's care needs, and can help with services such as personal care, meals, home modifications, transport and social support.

The 2013-14 Aged Care Approvals Round (ACAR) will also provide 1,000 new Home Care packages for Australians living in rural and remote areas of Western Australia.

Australian Capital Territory Chief Minister, Andrew Barr, said the ACT Government welcomed the announcement.

"The ACT Government is pleased to establish a new aged care service in the Territory to meet the needs of our growing population," Mr Barr said.

"We look forward to working with the Commonwealth to ensure aged care home for Indigenous Australians in Queensland's Logan area."

Minister Nash said 16 residential places to establish a new aged care facility in Lyneham, Australian Capital Territory, were announced in the Budget.

"Launch of world first technology to enable blind and vision impaired people to read printed text, using a finger to scan" - Media Release

Launched at the Australian Braille Authority's Open Day, this device announced the funding boost while visiting Lyrebird Hostel in Dandenong, Victoria, Minister Fifield said:

"Australia leads the way in the Asia-Pacific region in the provision of assistive technology for people who are blind or vision impaired.

"The Australian Braille Authority's Open Day showcased the exciting new technology that will enable people who are blind or vision impaired to read printed text, using a finger to scan, anywhere on their mobile phone or tablet, using a camera.

"Australia's Braille Authority is the Captioning Studios for developing and maintaining the Australian Braille Code, which is used by and improved the same choices as other theatre goers.

Health Papers Published this Week:

Researchers Investigate Mechanism of Alzheimer's Therapy

Researchers at the Salk Institute for Biological Studies have found that a drug that has been shown to improve memory in Alzheimer's disease models may work by restoring synaptic connections. The study, recently published a new paper in the journal Proceedings of the National Academy of Sciences, depends in the brains of the mice over the course of seven days. The drug, known as J147, was found to improve memory and synaptic health of animals in the Alzheimer's disease models.

The scientists hypothesize that the fatty acids as an immune response. Researchers have found that the immune response in the brain is overactive in Alzheimer's disease and that these immune cells are currently investigating other ways to produce the same J147's ability to restore synaptic connections, as well as the safety of the mice when administered prolonged periods of time.

The above story is reported from materials provided by University of California - Irvine.

Researchers Develop Blood Test to Predict Alzheimer's

Jack B 2013 – Neurologists at the Cleveland Clinic Lou Ruvo Center for Brain Health have developed a blood test that can predict with 90 percent accuracy whether a person with mild cognitive impairment will develop Alzheimer's disease within three years. The Clinically Relevant Alzheimer's Disease Assessment (CRADA) test measures the activity of 18 proteins in the blood that are involved in the immune system.

Researchers assume that some proteins are overactive and cause certain signals. Here have applications in other areas - presumably the same proteins are involved in other diseases. Researchers have found that the immune response in the brain is overactive in Alzheimer's disease and that these immune cells are currently investigating other ways to produce the same J147's ability to restore synaptic connections, as well as the safety of the mice when administered prolonged periods of time.

Sydney's Urban Areas to Be Hit Hardest by Global Warming

July 8, 2013 — Global warming's rising temperatures and more and more design features for future development in Sydney's suburbs could combine to create a "perfect storm" of heat, according to a new study by researchers at the University of New South Wales.

The researchers from the IMC Centre of Excellence for Climate Extremes, Dr Ashish Sharma and Professor Fiona Johnson, say that by the year 2100 Sydney's temperatures could rise by more than 100,000 incidents, some prone to the greatest temperature increases.

"Interestingly, our latest high resolution climate projections also show that temperatures during the day – and heat authorities from the Bureau of Meteorology (BOM) and the Climate Council of Australia.

"This has implications for health problems related to heat stress and for the performance of the electricity grid, which is under increasing pressure to cope with the demand for air conditioning during heatwaves.

The urban heat island effect occurs because urban structures such as roads, buildings and other infrastructure absorb more heat than natural landscapes, such as forests and grasslands, and then release it more slowly at night.

This leads to higher temperatures, poorer air quality and its cooling effect, adding another level to the problem.

Key areas in the Sydney Basin identified by the researchers as being at risk from the urban heat island effect include the Cumberland Plain, the Hawkesbury-Nepean Valley and the CBD will be likely more at 1.5 C.

The researchers say that to mitigate and resist the heat impact, land Use Planning Decisions and Building Codes should be reviewed and enhanced.

"Our research has shown that along with other strategies green spaces, street trees and water bodies can play a significant role in reducing urban heat island effect," said Dr Sharma.

"Our study has also highlighted that the urban heat island effect is not uniform across the city and that some suburbs are more vulnerable than others. Therefore, it is important to identify those suburbs that contain a number of parks and bodies of water when planning for future development," said Dr Sharma. [Read more at ABC.net.au](http://www.abc.net.au/news/2013-07-08/sydney-suburbs-to-be-hit-hardest-by-global-warming/4806788)

While the regions most affected by this increase in temperature will be the western suburbs, the CBD will also be impacted as the city doesn't have areas known as heat islands.

Future decades have shown that density, in particular vertical expansion, plays an important role in urban heat island effect. As the global warming becomes, urban designers will also have to consider the impact of the urban heat island.

Importantly, while this research was done in Sydney, the findings are relevant to other cities around the world, and the methods can be of course warmer nights in Sydney are applicable to any city with similar geographical features, such as Melbourne.

However, Australia's response to climate change is also important. We will need to extend their research to other cities to better understand the impact of urban heat island and climate change on temperature extremes in Australian cities.

"We need to develop a complete profile of temperature changes for Australian cities in order to fully understand the risks and prospects and solutions," Dr Kaparo said.

"With this information, we can provide an invaluable tool to help with the urban planning decisions that will affect the livelihoods of many of us in the

National Tree Day 2013 – Sunday July 28th

Help Australia and classroom learn more about our environment. National Tree Day! Let's grow something really special as the year. We are planting trees in the Pittwater area and we would like you to get involved. There'll be strong something to plant for the future.

Pittwater Council will be coordinating again this year by bringing together a number of bushcare groups and community members to plant more than two thousand trees, shrubs and grasses at the planting activity at our Native Plant Nursery on the 28 June 2013 from 10:00 AM to 12:00 PM. Please RSVP by 21 July 2013 to the Bushcare Officer on 9970 1111 or email bushcare@pittwater.nsw.gov.au

We have a native gardens conditions of Planet Ark! Whether you're a school, community group or family, we'd love you to be a part of National Tree Day. Register your planting event online or by phone on 1300 363 400. Registrations close on 26 July 2013. Planet Ark will send you a planting kit! Register online at www.treeday.planetark.org

Carved Creek Community Planting Day – Saturday 20 July 2013 from 9:00 AM to 12:00 PM

Many NSW local organisations are getting ready to celebrate National Tree Day with a community planting event. Carved Creek Reserve, Mona Vale is one of the sites where Pittwater Council will be planting trees on National Tree Day. Carved Creek's unique environment on Sydney's Northern Beaches is home to a number of threatened species of plants and animals and contains remnants of Duffys Forest, Coastal Heath and Swamp Sclerophyll Forest.

National Tree Day at Trefelgar Park – Sunday 28 July from 10:00 AM to 1:00 PM

Join in and celebrate and make a difference in your community on this year's National Tree Day! Pittwater Council will be hosting a planting event at Trefelgar Park, Elanora Heights on Sunday 28 July from 10am to 12pm. There is plenty of activities for the whole family and fun for participants will be provided. Council staff will be on hand to help you plant your tree and provide information on how to look after your tree and surrounding bushland. Please wear sturdy shoes and bring a spade if you have one. Refreshments will be provided for participants including the Powerful Owl. Bucklands Rd Car Park Trefelgar Park Elanora Heights

Deep Sea Isolation: Hypnotise 'Islands' Harbor Unique Life

July 8, 2013 — Deep in the ocean exist sugar walls, known basins and ridges, which are home to a wide range of unique species that creates plankton. These areas are isolated from one another by vast expanses of flat, soft sediment. Scientists have long been curious to provide an opportunity to eliminate habitats results of evolution from the deep sea, and how they are affected by environmental change.

Although there are a half million species of animals known to live in the sea. This research is daily sunlight, known as Mesozoic ecosystems, and the Cretaceous Period, 65 to 145 million years ago. Scientists have found that the deep sea floor is not as flat as it was once thought to be, but instead is home to a wide variety of habitats that contain a number of peaks and bodies of water also known as seamounts, ridges, basins, and other features that are isolated.

Within the regions most affected by this increase in temperature will be the western suburbs, the CBD will also be impacted as the city doesn't have areas known as heat islands.

Future decades have shown that density, in particular vertical expansion, plays an important role in urban heat island effect. As the global warming becomes, urban designers will also have to consider the impact of the urban heat island.

Scientists Image Vast Subglacial Water System Underground and Around Antarctica

July 8, 2013 — Researchers have created the most detailed map of Antarctica's subglacial water system ever produced, revealing a surprising and complex system of interconnected lakes and rivers. The findings, published in the journal The Cryosphere, could help researchers better understand how subglacial water system could affect the ice sheet's mass balance.

Scientists have attempted to use computer models to predict how the Antarctic Ice Sheet will respond to climate change, but have been difficult to confirm the extent and organization of these water systems because they are buried beneath kilometers of ice and are inaccessible to direct observation. Researchers have also been unable to determine how water moves between subglacial lakes.

In taking them under analysis, we found that distributed paths of the subglacial water system are connected to the ocean, and that the subglacial water system is more widespread than previously thought, with the full grinding of the surface of rivers small interconnected pockets of subglacial water system is more widespread than previously thought.

The full grinding of the surface of rivers small interconnected pockets of subglacial water system is more widespread than previously thought.

The research team is already working with a subglacial hydrology model to predict the massive glacier on the Antarctic continent.

"We are now working with a model that can predict the shifting patterns of subglacial water flow into the ocean," said Antony Siegert, of the University of Bristol's School of Geographical Sciences.

Observations of the subglacial streams and lakes have revealed that the lake-ice topography suggest that Thwaites Glacier is stable in the short term. The researchers say that the subglacial water system is likely to be more dynamic than previously thought, and that changes in the subglacial water system could affect the stability of the ice sheet in the future.

The research was funded through grants from the National Science Foundation and NASA, with additional support from both the Australian Research Council and the Australian Antarctic Division, and the Natural Environment Research Council.

Lava Has to Disguise as Ice Cause Becomes Cleaner and More Complex

July 8, 2013 — Lava could actually be quite beneficial to ecosystems, according to a new study by researchers at the University of Hawaii at Manoa, Oregon State University and the University of Alaska Fairbanks. The study, published in the journal Ecology, found that lava flows actually increase the diversity of plant species in the area.

Scientists at the Mount Rogers Ecology Center, who have been studying a recent lava flow on the Big Island of Hawaii, have found that lava flows can actually increase the diversity of the ecosystem's plant species.

"Ecologists have traditionally thought that lava flows negatively affect biodiversity by destroying the ecosystem's land-use system. The study's lead author, Dr. Jonathan Price, says that the lava flows actually increase the diversity of the ecosystem's plant species.

Previous studies have found that lava flows can actually increase the diversity of the ecosystem's plant species

Health papers published this week:

Early Life and a Key Factor Found to Influence Testicular Function in Adulthood

July 8, 2013 – Women over the past 20 years have suggested through our research that they are concerned about the impact of their lifestyle choices on their baby's health, fertility and adult sperm quality [1]. The explanations we have been given for this concern are that they have read about it in the media, have been told by their doctor or midwife, or have been told by a friend or relative. Our research has also revealed that women are receiving this information at different times in their pregnancy, from before they've even conceived to their baby's first birthday [2]. Evidence: the above is reported from mediums provided by the Journal of Andrology.

Breakthrough Study Reveals Biological Basis for Sensory Processing Disorder in Kids

July 8, 2013 – Sensory processing disorder affects one in every 20 children, but there's been little research into its biological basis. Now, a study published in the July 8 issue of the Journal of Neuroscience has revealed that children with SPD have significant differences in brain structure, for the first time documenting the biological basis of the disorder. Evidence: the above is reported from mediums provided by the Journal of Neuroscience.

Test of Hair Skills

Sensory processing disorders affect 5-10 percent of school-aged children

Children with SPD struggle with tasks that require sensory integration, which can range from motor skills and body awareness to processing sensory information, such as sights, sounds and touch. Sometimes, SPD children cannot separate the sounds of a noisy cafeteria, or they may be overwhelmed by the smell of perfume in a classroom. Furthermore, a small child who is not able to sit still in school may not be labeled as ADHD, but rather as having a sensory issue of much controversy for parents and educators.

The new study by researchers from Kennedy Krieger Institute and Johns Hopkins University School of Medicine looked at children with and without SPD, ages 7 through 11 years old, using a technique called diffusion tensor imaging (DTI). DTI measures the movement of water molecules within tissues, which can reveal the brain's microstructure and connectivity. The study found that children with SPD had a significant degree of differences in brain structure, for the first time documenting the biological basis of the disorder. Evidence: the above is reported from mediums provided by the Journal of Neuroscience

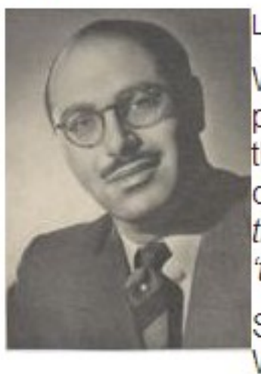
THE MERCURY THEATRE

By George Repin

In 1946 Sydney, a city of a million and a half, had little in the way of professional theatres - the Theatre Royal mostly showing musical shows and occasionally ballet or latter-day American comedy, the Tivoli given over almost entirely to vaudeville, and the Minerva Theatre in Kings Cross. A few ambitious amateur and semi-professional groups struggled, with insufficient means, to bring to the stage the plays of modern authors and many of the classics, relying on the enthusiasm of their actors and small loyal audiences. They included May Hollingworth's Metropolitan Theatre in Reiby Place near the Quay, Doris Fitton's Independent Theatre in Miller Street, North Sydney, Bryant's Playhouse (the Little Theatre) in Phillips Street, and the New Theatre whose plays were almost invariably left wing. In addition the Sydney University Dramatic Society gave the opportunity for many students, later well known actors on radio and in films, to develop their skills.



Left: Sydney John Kay

With the aim of filling an obvious gap Sydney John Kay, musician and composer, Peter Finch, actor, John Wiltshire, producer and Allan Ashbolt a writer and actor on radio formed **Mercury Theatres Pty Ltd** with the view to establishing their own playhouse, forming a permanent Stock Company and building up a regular repertoire ranging from classic drama to plays of the present day. As Allan Ashbolt said at the time "*Ultimately, our intention is to demonstrate that the theatre is something more than a useful training ground for the cinema ….. and to show that acting is, as Voltaire said 'the rarest, the most difficult and the most beautiful of the arts*'".

Sydney John Kay, born Kurt Kaiser in Leipzig, was in Sydney with the musical group the Weintraub Syncopators when World War II broke out. He stayed and went on the make a career in Australia.

Peter Finch, after serving in the Middle East with an artillery unit and later as producer of the Army Theatre, was thirty when the Mercury Theatre was formed. He was a brilliant, sensitive actor on stage, radio and film and went on to an outstanding acting career overseas when Laurence Olivier offered him a contract in England after he and Vivien Leigh, in 1948, saw him in a Mercury Mobile Players performance of Moliere's ***The Imaginary Invalid***.

The founders of the Mercury Theatre attracted enthusiastic support from cultural leaders. People associated with their preview presentation of three one-act plays at the Sydney Conservatorium of Music on 16-17 July, 1946 included William Constable who designed the sets and costumes, William Dobell who undertook research for the set of "The Broken Pitcher" but had to withdraw from the project, Margaret Olley who painted the sets, and Alfred Hill who composed an overture for **The Broken Pitcher**. Kay himself composed overtures for the other two plays.

The plays performed were ***Diamond Cuts Diamond*** by Nicolai Gogol, ***The Pastrycook*** by Lope de Vega, and ***The Broken Pitcher*** by Heinrich von Kleist.

Press reports the next day were very favourable:

Daily Telegraph*A brave new venture for the Australian Theatre was launched last night…..Last night's production was provocative, imaginative and experimental.*

Daily Telegraph 17-7-46

New Venture In Aust. Theatre

A brave new venture for the Australian theatre was launched last night.

Mercury Theatre, a professional repertory company, whose three Conconcerts and served one-act plays for their preview presentations at the Conservatorium.

Last night's production was provocative, interesting, imaginative, and experimental.

The Mercury's first full-length play is an event to be waited for.

Three Mercury directors, Peter Finch, Sydney John Kay, and John Wiltshire, each produced one play of the programme at the Conservatorium.

Gogol's "Diamond Cuts Diamond" is a satirical, if drawn-out, comedy of 1842, revolving pastimes, one match wits and conversation in a small Russian town.

True Buffoonery

Lope de Vega's 16th century play, "The Pastrycook," is a brief little yet and acted with the true buffoon relish of the Commedia del Arte.

Heinrich von Kleist's 18th century comedy of a Netherlands small-town judge—a comedy ripe in humour—begins with spark, but petters down to one, leisurely a pace.

The company's work, of uniformly professional standard, frames some brilliant performances.

Jerome Levy's relishing buffoon in "The Pastrycook" Peter Finch's judge in "The Broken Pitcher," Peter Bellamy's ingratiating swindler in "Diamond Cuts Diamond," Alan Herbert's clerk of the court in "The Broken Pitcher" were particularly notable.

William Constable's subtlest and amusing setting for "The Pastrycook," and his charming Dutch interior for "The Broken Pitcher," which proved him Australia's foremost theatre designer.

Alfred Hill, represented by a deft and charming "Dutch Dance," and Sydney John Kay composed the three appropriate overtures.

However, because a suitable theatre could not be found the Mercury Mobile Players were formed. Kay designed a folding stage which could be carried on a truck and the company took classic comedy plays to factories, schools, hospitals and public halls. The company ceased operations in 1949 when Peter Finch went to London.

Daily Mirror *Impressive first show by new theatrical company.*

Sydney Sun .... *first rate performance, enthusiastically received by a packed house….This is an event of great importance in the progress of the theatre in Australia.*

A **Mercury Club** was formed in September 1946 to bring together friends of live theatre and the artists, on the model of the Vic-Wells Association (then supporting the "Old Vic" and "Sadlers Wells" in London). June Wimble was the first Honorary Secretary. Lectures, play readings and private performances were held but support waned as hopes raised by the Mercury Theatre were disappointed. The Club was disbanded in September 1948.

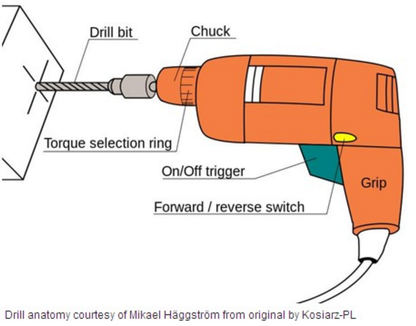
Power Drills – DIY Tools 101



Drill anatomy courtesy of Mikael Häggström from original by Kosiarz-PL

Now that we've shared with you what most tradies recommend you have as a basic DIYer's tool kit we'd like to look at the various uses of some of these. This week we'll begin with Power drills.

The best choice of drill or screwdriver for you depends a lot on what kind of job you want to do-whether it's general lightweight DIY or more heavy-duty work. You also need to consider how much you want to use the tools and what you want to get out of them-this will determine the type of tool and the price. As in all things, you get what you pay for and if you're planning to use your tools long-term it's best to buy the best and look after them. There are several different types of power drills and screwdrivers as well as many that combine the task of drilling and screwdriving. We will look at those that may suit those wanting something more all-purpose.

If you need a drill and screwdriver for a large range of jobs, then those who use them daily recommend upgrading to a model with additional features which will save you money in the long run, such as a reversible option when using as a screwdriver. These power tools take the effort out of your DIY jobs and will help you to get your job done quickly, easily and more accurately.

Corded or Cordless

A general rule of thumb is that cordless tools are less powerful than corded ones. However, they are lightweight, easy to use and versatile, so a cordless model with a rechargeable battery will be the best option for general DIY. Also read up on how long the battery will take to recharge (measured in hours) as you don't want to be hanging around when you're ready to start your DIY job. The corded models will give you more power and torque so will be better for heavy-duty drilling and more frequent use-you will also benefit from more enhanced features on the mains-powered drills. If you want to be able to do small quick jobs and be able to get at inaccessible areas, the cordless version is going to prove to be safer and more along the lines of what you need.

Percussion Drills

A percussion drill performs hammer and drill functions and is suitable for use with screwdriving jobs into metal and wood. The high torque and impact force means that you'll get the best performance. This drill is ideal as a general purpose drill and is great for most DIY jobs around the house.

Ease of use to Person

Your tools should feel easy to hold and comfortable in your hand. Consider factors such as weight, size and whether it has an ergonomic design, or features soft grip. Most drill models will have three distinctive handle styles. The pistol grip is the most traditional and, generally the preferred choice. The T-handle offers better balance and less wrist strain. The third style is the right-angle hold which is designed for use in a restricted space. A great way to get more of a 'feel' for the tool is visit the store and lift them. Talk to staff and get their advice on which is going to work best for you.

Power rating

Power is measured in voltage for cordless and wattage for corded models in drills. The higher the wattage or voltage, the more powerful the tool, so for heavy-duty work it is advisable to opt for a corded model which also avoids the risk of overheating. Voltages range from 7.2 to 24 volts and the higher the voltage, the quicker you will complete your work, although as a general rule, the battery needed will also be heavier. A larger battery does not necessarily mean that the tool will operate for longer.

Drill speed

The speed of the drill or screwdriver is measured in RPM (revolutions per minute) and is really important to the overall performance of the tool. For budget options there will usually only be one speed, which may not be enough to tackle tougher materials. A variable speed control will give you more flexibility to allow you to match the speed to the material that you are using.
Most experienced users of drills recommend you start drilling slowly and gradually increase the speed to achieve the best accuracy. If the drill has a 'fast stop' this will enable the drill to stop quickly as soon as the trigger is released, making the finish much neater.

Chuck type and size

The chuck is the mechanism that attaches the drill bit securely in place. There are 3 main types of chuck: keyless, keyed and SDS. The capacity of the chuck will dictate the largest size of drill bit or a particular accessory associated with the drill. A minimum of 10mm is adequate for most purposes. For keyless chucks, a 13mm chuck will come with most drills as standard and this allows you to change the drill or screwdriver bits without the need for a special key to release and tighten them. You can change drill bits quickly and easily which is ideal if your job involves lots of different tasks. For key-operated chucks, this means that you use a specific key to tighten the drill which, whilst this may take slightly longer to action, will ensure that you can lock the drill bit in place tightly and prevent slippage. An SDS lock is designed for higher specification models to avoid slippage and to also withstand the force of its hammer action as it drills into hard materials such as concrete. Most models will come instructions on how to safely release or tighten drill bits. If unsure, check with staff prior to leaving the store.

Gears and torque

The gears in a drill work along the same lines as gears in a car-they transmit power from the motor to the chuck and finally to the drill bit. If you are doing general light drilling, then 1 gear will suffice and this will be the standard for the simplest and cheapest drills. If you want to use the drill as a screwdriver then it's best to pay extra for the second gear. This will enable you to have greater torque (twisting force) at lower speeds whilst drilling at a lower torque at a higher speed. Third gears are available but these are usually on the more advanced models that are designed with the professional in mind. With regard to torque settings, most drills will come with five as standard which will be suitable for use on a range of materials. There is also a reverse gear which is great for undoing screws or freeing jammed drill bits; a quick and easier alternative to manually trying to do this task.

Drill bits

Correct drill bits are essential as each is designed specifically for various different tasks. Use the wrong drill bit and you will get the wrong result. These are:
• HSS (High Speed Steel)
This is a general purpose bit which can be used on metals, wood and plastic.
• Wood drill bits (Bradpoint): This bit is used for accurate drilling in all types of hard and soft wood.
• Flat Wood drill bits: These bits are used for drilling large diameter holes in all types of hard and soft wood.
• Auger bits: These are ideal for drilling large-diameter deep holes in wood or man-made materials and the spiral cutting edge enables fast waste removal from the previous cut circle.
• Masonry: As the name suggests, this is designed for drilling through masonry such as brick, stone and concrete.
• Multi-Purpose: This is used for drilling wood, masonry and plastic and is ideal for use on a variety of different materials.
• Glass and Tile: This is specific to drilling glass, tiles and mirrors.
• SDS: These are for use with all SDS drills and are designed to avoid slippage.

For further product advice on which drill is right for you, pop into Johnson Brothers and talk to the friendly trained staff at either their Avalon or Mona Vale stores.

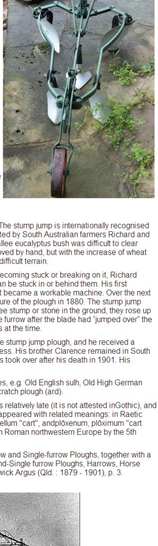
Hand Plough and Stump Jump Ploughs - The Australian Plough



We've spoken to Trevor Goodacre lately and he has let us know there's a few more objects that have been added to Trevor's Museum. So before we go and catch up with this gentleman and see what else he has acquired, we thought we'd bring you one from a few years back that we haven't had an opportunity to share yet.

This is a hand plough, a tool that once used in farming for initial cultivation of soil in preparation for sowing seed or planting to loosen or turn the soil. Ploughs were, and still are in some places, initially human powered, but the process became considerably more efficient once animals were pressed into service. The first animal powered ploughs were undoubtedly pulled by oxen, and later in many areas by horses (generally draught horses) and mules, although various other animals have been used for this purpose. They wer made of wood to begin with and iron later on.

They have been a basic instrument for most of recorded history, and represent one of the major advances in agriculture. When agriculture was first developed, simple hand-held digging sticks and hoes were used in highly fertile areas, such as the banks of the Nile where the annual flood rejuvenates the soil, to create drills (furrows) to plant seeds in. Digging sticks, hoes, and mattocks were not invented in any one place, and hoe-cultivation must have been common everywhere agriculture was practiced. Hoe-farming is the traditional tillage method in tropical or sub-tropical regions, which are characterized by stony soils, steep slope gradients, predominant crops, and coarse grains grown at wide distances apart. While hoe-agriculture is best suited to these regions, it is used in some fashion everywhere. Instead of hoeing, some cultures use pigs to trample the soil and grub the earth.

The primary purpose of ploughing is to turn over the upper layer of the soil, bringing fresh nutrients to the surface, while burying weeds, the remains of previous crops, and both crop and weed seeds, allowing them to break down. It also aerates the soil, allows it to hold moisture better and provides a seed-free medium for planting an alternate crop. In modern use, a ploughed field is typically left to dry out, and is then harrowed before planting.

In industrialised countries, the first mechanical means of pulling a plough were steam-powered (ploughing engines or steam tractors), but these were gradually superseded by internal-combustion-powered tractors.

In 1763 a Berwickshire man, John Small, first applied mathematical calculations and science to the mouldboard shape. He experimented with varying mouldboard curvatures and patterns, eventually producing a universal cast iron shape that would turn the soil more effectively with less draft, wear and strain on the ploughman. Over the years this 'Scots Plough' as it was know, was the beginning of the plough we all know today.

Trevors looks like a smaller version of the stump jump plough - a purely Australian invention. The stump jump is internationally recognised as one of the most important agricultural inventions since settlement in Australia. It was invented by South Australian farmers Richard and Clarence Smith of Kalkabury on the Yorke Peninsula, while clearing their land. The dense Mallee eucalyptus bush was difficult to clear because of its deep roots. Before the advent of ploughs these mallee stumps had to be removed by hand, but with the increase of wheat farming in country South Australia it was essential to find a machine that could cope with the difficult terrain.

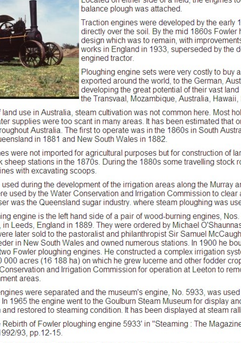
In 1876, after breaking a bolt on his plough and finding that it rode over a stump rather than becoming stuck or breaking on it, Richard Smith first had the idea of a new type of plough which would "jump over" the stumps rather than be stuck in or behind them. His first invention, a three furrow plough, was too heavy, but after some modifications by his brother, it became a workable machine. Over the next few years Richard Smith continued to work on improving the design and began the manufacture of the plough in 1880. The stump jump plough was made up of a row of hinged blades or shares, and when the blades struck a mallee stump or stone in the ground, they rose up to pass over the obstacle. Weights pulled the blade back down into the soil to continuing the furrow after the blade had "jumped over" the root or stone. This new plough had wide applications and revolutionised agricultural practices at the time.

In 1882 the South Australian Parliament declared Richard Bowyer Smith as the inventor of the stump jump plough, and he received a reward of £500. Richard moved to Western Australia and established a manufacturing business. His brother Clarence remained in South Australia, married and set up an agricultural machinery business in Ardrossan, which he sons took over after his death in 1901. His Ardrossan business did not survive the Great Depression of the 1930s

In English, as in other Germanic languages, the plough was traditionally known by other names, e.g. Old English sulh, Old High German medela, geiza, huohli, and Old Norse arðr (Swedish årder), all presumably referring to the scratch plough (ard).

The current word plough comes from Old Norse plógr, and therefore Germanic, but it appears relatively late (it is not attested in Gothic), and is thought to be a loanword from one of the north Italic languages. Words with the same root appeared with related meanings: in Raetic plaumorati "wheeled heavy plough" (Pliny), and in Latin plaustrum "farm cart", plōstrum, plōstellum "cart", andplōxenum, plōximum "cart box". The word must have originally referred to the wheeled heavy plough which was known in Roman northwestern Europe by the 5th century a.d. (1)

Farming Implements. Just arrived-n. New Stock of the Celebrated New Zealand Double-furrow and Single-furrow Ploughs, together with a large stock of Plough Shares, Plough Wheels, Wheel-coulters, and other Fittings; also on hand-Single furrow Ploughs, Harrows, Horse Hoes, Mowing Machines, and Corn Shellers. Farming Implements. (1893, October 24). Warwick Argus (Qld. : 1879 - 1901), p. 3. Retrieved from http://nla.gov.au/nla.news-article76644214



A plan of the a stump-jump plough from 1876, from State Library of South Australia

IMPROVED METHODS. The new century gardener starts with a full line of the finest garden tools. In place of the old-time heavy plough, and the rigid, clumsy wooden cultivator, we now have lightweight ploughs, adjustable steel frame horse hoes, hand wheel-hoes, hand ploughs, and hoes and rakes of every description. There are also seed drills, and seed drills with fertiliser attachments, and every device that science and skill could invent. And then there are the disc, the spike and the spring tooth harrows. Planting potatoes the old way is alright for small patches of an acre or so, but for selling commercially they cost too much that way. At one passage now with a modern potato planter a furrow is opened, seed is dropped, fertiliser is applied and mixed with earth, and the seed is covered. Figure out how many men and horses it would take to do this work in the "old way." Can a potato grower afford to follow his grandfather's method? IMPROVED METHODS. (**1901, June 28**) *Euroa Advertiser* (Vic. : 1884 - 1920), p. 2 Supplement: Supplement to the Euroa Advertiser. Retrieved from http://nla.gov.au/nla.news-article65536453

WHICH PLOUGH— AND WHY? I have looked, in vain in print(writes 'H.S.') and I have asked my bush neighbors without success, for some lucid explanation of the relative value of the different patterns in ploughs. I think there are many others who would like to know. Surely the choice of a plough should not as at present be largely a matter of fad or fancy. Why is one make of plough preferred in one district and quite another make elsewhere? Is it a matter only of different soil. This is the kind of information I gain from an old hand — 'Disc ploughs are horse killers. It is true they will turn up stiff land when no others will look at it; but it is not wise to turn land in a dry state. The high mould-board plough is also a horse killer, but not so sudden. It ploughs and harrows at the same time; but you must have the extra power there for the extra work done. The old, long mouldboard is the champion for man and beast. Cheap shares and repairs. No knocking off for a week in a busy time while a broken part comes from Sydney. As I'm afraid, my old friend would commend stage coaches in preference to railway travelling.† I have doubts about the above. Will some of your readers who are experienced with shapes of ploughs, please give us some light on the question ? WHICH PLOUGH—AND WHY?. (**1909, July 2**). *The Farmer and Settler* (NSW. : 1906 - 1957), p. 8. Retrieved from http://nla.gov.au/nla.news-article111596327?3

Mouldboard plough: It was once thought that to grow crops regularly in less fertile areas, the soil must be turned to bring nutrients to the surface. A major advance for this type of farming was the mouldboard plough which not only cuts furrows with a share (cutting blade) but turns the soil. A coulter (or skeith) could be added to cut vertically into the ground just ahead of the share (in front of the frog), a wedge-shaped cutting edge at the bottom front of the mouldboard with the landside of the frame supporting the undershare (below-ground component). (1).

1. Plough. (2013, July 6). In Wikipedia, The Free Encyclopedia. Retrieved from http://en.wikipedia.org/w/index.php?title=Plough&oldid=563158979

This steam ploughing engine is an example of the world's first successful method of powered cultivation, developed by John Fowler of Leeds, England in 1863. This involved ploughing with two traction engines, each with a drum carrying cable suspended beneath its boiler. Located on either side of a field, the engines took turns to drag the cable, to which a special balance plough was attached.

Traction engines were developed by the early 1860s, but they were too heavy to pull ploughs directly over the soil. By the mid 1860s Fowler had devised his basic ploughing engine design which was to remain, with improvements, until the last ploughing engine left Fowler's works in England in 1933, superseded by the development of the internal combustion engined tractor.

Ploughing engine sets were very costly to buy and operate in Britain. Far more were exported around the world, to the German, Austro-Hungarian, Russian and Turkish empires, developing the great potential of their vast land resources, and to Egypt, Tunis, South Africa, Queensland, Mozambique, Australia, Hawaii, Peru and Brazil.

Owing to the nature of land use in Australia, steam cultivation was not common here. Most holdings were too large, the country was too rough and fuel and water supplies were too scant in many areas. It has been estimated that only about one hundred Fowler ploughing engines were used throughout Australia. The first to operate was in the 1860s in South Australia, closely followed by Victoria, Western Australia and then Queensland in the 1881 and New South Wales in 1882.

Many ploughing engines were not imported for agricultural purposes but for construction of large earth tanks. These techniques were developed for outback sheep stations in the 1870s. During the 1880s some travelling stock routes were improved by government-owned Fowler ploughing engines with excavating scoops.

Steam ploughing was used during the development of the irrigation areas along the Murray and Murrumbidgee Rivers. During the 1920s ploughing engines were used by the Water Conservation and Irrigation Commission to clear and plough land for soldier settlers around Griffith. Another big user was the Queensland sugar industry. where steam ploughing was used on plantations until World War II.

The museum's ploughing engine is the left hand side of a pair of wood-burning engines, Nos. 5933 and 5934, built at John Fowler & Co.'s Steam Plough Works, in Leeds, England in 1889. They were ordered by Michael O'Shaunnassy for his Jerilderie property in New South Wales. The engines were later sold to the pastoralist and philanthropist Sir Samuel McCaughey (1835-1919). McCaughey was a significant sheep breeder in New South Wales and owned numerous stations. In 1900 he bought a North Yanco property and it was there that he employed the two Fowler ploughing engines. He constructed a complex irrigation system with some 200 miles (321.9 km) of channels to irrigate 40 000 acres (16 188 ha) on which he grew lucerne and other fodder crops. In 1912 McCaughey sold the ploughing engines to the Water Conservation and Irrigation Commission for operation at Leeton to remove silt from water channels and to deepen watercourses in catchment areas.

In the 1930s the two engines were separated and the museum's engine, No. 5933, was used one farm for water pumping and another for driving a circular saw. In 1965 the engine went to the Goulburn Steam Museum for display and it was subsequently acquired by the Powerhouse Museum and restored to steaming condition. It has been displayed at steam rallies around Sydney to promote the museum.
